

It's not all oily rags and overalls...

"Being an engineer doesn't mean being covered in oil and being impressed by motors; it means designing products that people can use."

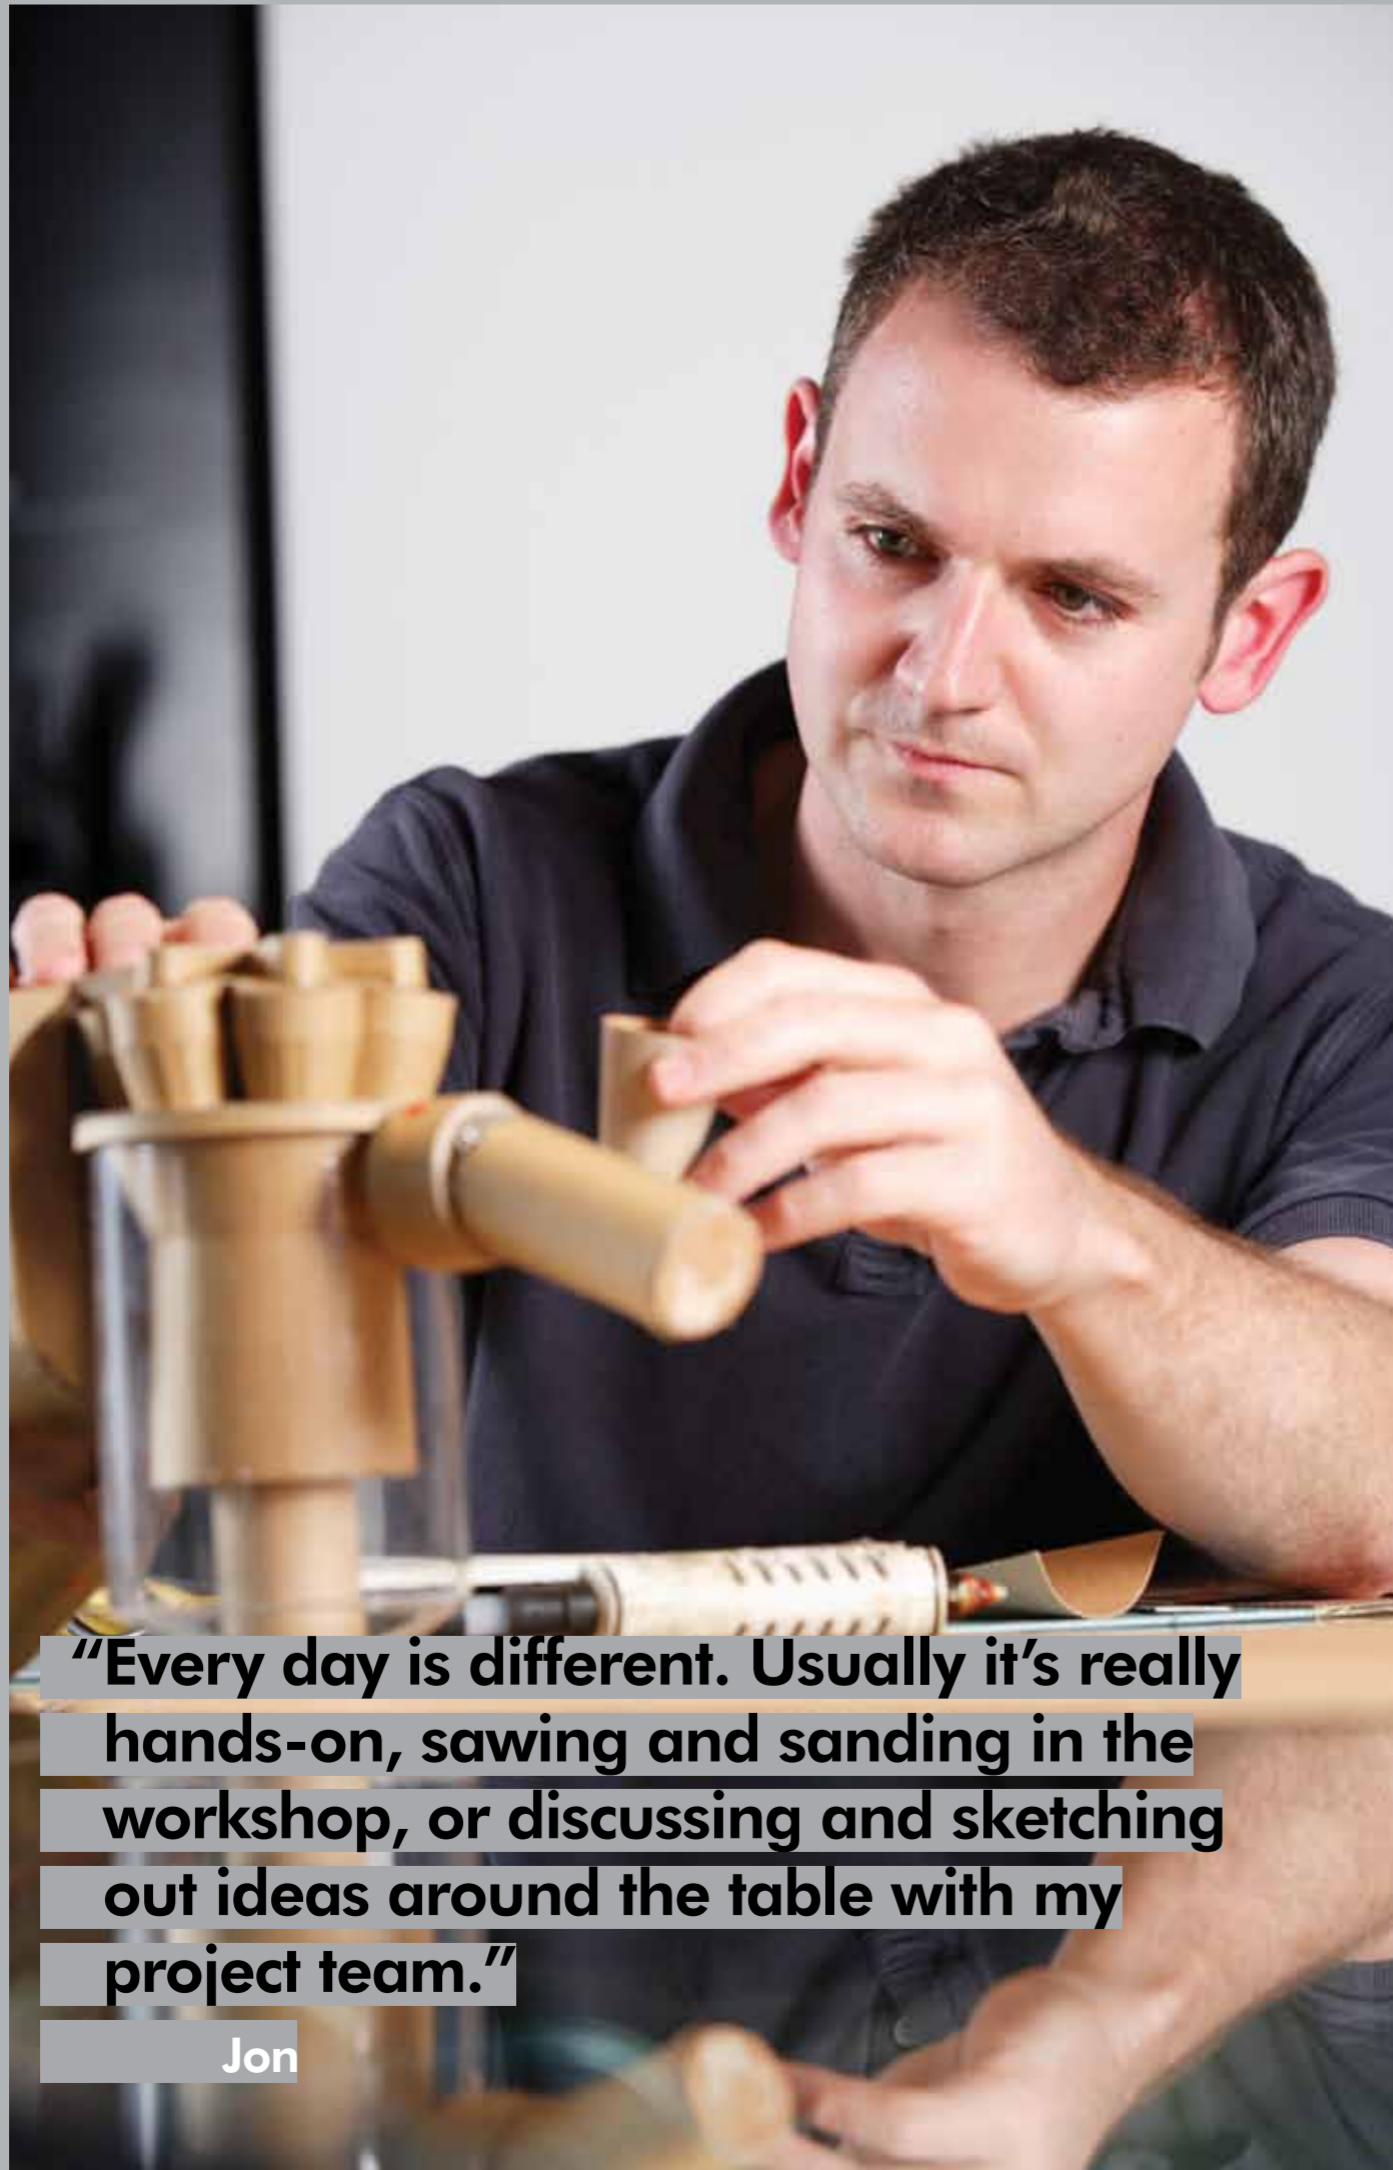

Amy

As a design engineer I get to see products develop at every stage: from initial ideas and cardboard modelling, through early prototypes, test prototypes and finally into the production stage. And then you get to see it on the shelves."

"Every day is different. Usually it's really hands-on, sawing and sanding in the workshop, or discussing and sketching out ideas around the table with my project team."

Jon

"I get a great deal of satisfaction from creating simple and elegant solutions to difficult problems. My head might hurt at the end of the day, but it's always worth it."

Emily
